#### **DETAILED ACTION**

# **INTERVIEW SUMMARY**

After speaking with Attorney Daniel Moon on November 7, 2006 at 11:15 AM applicants have decided to withdraw claims 1-6, and keep allowable subject matter claims 7-29 and thus put application in condition for allowance.

### Allowable Subject Matter

Claims 7-23 and 25-29 are allowed.

## **EXAMINERS REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance:

The prior art does not anticipate nor render obvious the combination as set forth in the independent claims and specifically does not show a third connection pipeline for connecting the refrigerant flow controller, and a suction end of the compressor and the distributor. Prior art further does not show a first connection pipeline for connecting the discharge end of the compressor, the refrigerant flow controller, the outdoor heat exchanger and distributor in that order. Regarding claims 7 and 24, Sekigami et al. (US 5467604) discloses an outdoor unit 1a with a compressor 2a, a refrigerant flow controller 9a capable of selectively guiding refrigerant, an outdoor heat exchanger 3, and a defrosting device positioned at a side of the outdoor heat exchanger capable of removing frost from the outdoor heat exchanger during a heating operation mode of the air conditioner, and a piping system for connecting the compressor, the refrigerant flow

controller 9a, the outdoor heat exchanger 3a and defrosting device 3b, see Figure 1. They further teach a plurality of indoor units (16a-16c) with indoor heat exchangers (6a-6c) and an expansion valve having an end connected to one end of each indoor heat exchanger (17a-17c). They further teach a distributor 11 between the outdoor and indoor units capable of selectively guiding refrigerant from the outdoor unit to the plurality of indoor units according to operation conditions. Sekigami et al. further teach a second connection pipeline 7a for guiding compressed refrigerant discharged from the discharge end of the compressor to the distributor. Sekigami et al. however fail to teach the discharge end of the compressor, the refrigerant flow controller, the outdoor heat exchanger, and the distributor are connected in that particular order along the first connection pipeline. Sekigami et al. further fail to teach a third connection pipeline for connecting the refrigerant flow controller, and a suction end of the compressor and the distributor.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gene L. Bankhead whose telephone number is (571)-272-8963. The examiner can normally be reached on 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cheryl Tyler can be reached on (571)-272-4834. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
